
Real Time Video Compression Techniques And Algorithms

1st Edition

real-time blind video temporal consistency - model does not require computing optical flow at test time and thus can process videos at real-time rates (400+ fps on 1280×720 videos). as existing video datasets typically contain low-quality frames, we collect a high-quality video dataset with 80 videos for training and 20 videos for evaluation. **real-time video zoom-in - d86o2zu8ugzlgoudfront** - introducing real-time video zoom-in smartphone users would like to use their phone camera like a video camcorder to record and zoom in/out continuously like a camcorder, as shown in the scenario below. in most smartphones, hardware limitations in real-time zoom-in when recording may restrict **sound synthesis from real-time video images** - digital video offers an interesting source of control information for musical applications. a novel synthesis technique is introduced where digital video controls sound spectra in real time. light intensity modulates the amplitudes of 32 harmonics in each of several synthesized "voices." problems addressed **real-time single image and video super-resolution using an ...** - real-time single image and video super-resolution using an efficient sub-pixel convolutional neural network wenzhe shi¹, jose caballero¹, ferenc huszar¹, johannes totz¹, andrew p. aitken¹, rob bishop¹, daniel rueckert², zehan wang¹ 1magic pony technology 2imperial college london 1{wenzhe,jose,ferenc,johannes,andy,rob,zehan}@magicpony 2deckert@imperial **adversarial perturbations against real-time video ...** - real-time video classification systems have also been deployed for automatic "fall detection" in elderly care facilities [48], and abnormal detection around automated teller machines [43]. all of these applications directly relate to the physical security or safety of people and property. thus, stealthy attacks on such real-time video **how to perform real-time processing on the raspberry pi - 18** a sample raspberry pi project that benefits from real-time - nerf tank let's say we want to have a raspberry pi control a deadly nerf tank - pi needs to detect the baddy - pi needs to move the turret to aim the nerf gun at the baddy - pi needs to fire the deadly nerf projectile at the baddy (if in range) - pi needs to make sure the tank does not collide with anything
