reordering variables with the attrib statement 1. the first step for using an attrib statement to reorder variables  
is to generate the statement itself by passing the two level name of the existing dataset for which you want to  
reorder the variables in a call to the macro code: **differential calculus of several variables - reed college**  
- abstract. these are notes for a one semester course in the differential calculus of several variables. the first  
two chapters are a quick introduction to the derivative as the best affine **complex variables and  
applications, seventh edition** - complex variables and applications seventh edition james ward brown
